## Non-Contacting <br> Angle Sensors

## RSC2800-600 Series

## Special features

- non-contacting, magnetic
- angle ranges available from $30^{\circ}$
to full $360^{\circ}$ in $10^{\circ}$ steps
- available with push-on coupling
or marked shaft
- simple mounting
- protection class IP 54 or IP 65
- Iong life
- internal resolution 12-bit
- independent linearity to $\pm 0.5 \%$

The RSC2800 non-contacting sensor utilizes the orientation of a magnetic field for the determination of the measure-ment angle. A magnet is attached to the sensor shaft, while the magnetic field orientation is captured with an integrated circuit. An analog output signal represents the calculated angle.

The housing is made of a special high grade temperature-resistant plastic material. Elongated slots allow easy mounting.

The special backlash-free pushon coupling ensures extremely quick and simple installation. The transducer is not sensitive to either dirt or dampness.

Electrical connections are made via a shielded cable with 4 lead wires which is sealed into the housing.

| Description |  |
| :--- | :--- |
| Housing | high-grade, temperature-resistant plastic |
| Shaft | stainless steel |
| Bearings | bronze sleeve bearing |
| Electrical connections | shielded cable with lead wires, AWG 26, outer diameter 4.5 mm |
|  | Cable |
| Ground | brown |
| Supply voltage | green |
| Output signal | white |
| Open | yellow |

Connect shield of connecting cable to ground.
